The Black Death Transformed Disease
The Black Death in Europe, from its arrival in 1347-52 through successive waves into the early modern period, has been seriously misunderstood. It is clear from the compelling evidence presented in this revolutionary account that the Black Death was almost any disease other than the rat-based bubonic plague whose bacillus was discovered in 1894.

One of the most interesting topics of Cantor’s narrative was his presentation of the current theory that the Black Death was not a single disease caused by bubonic plague alone but a pandemic resulting from plague and a virulent form of anthrax.

The Black Death Transformed: Disease and Culture in Early...
The opening sentence of his new book announces the author’s discovery: the so-called Black Death, the fearsome pandemic that killed Europeans on a massive scale in the fourteenth century, was “any disease other than the rat-based bubonic plague” (p. 1). Coming from anyone else, such an assertion might be dismissed out of hand.
